DEMOCHARGE™

The easy, efficient way to create high-impact animated demos, software simulations, and eLearning materials

DemoCharge enables you to quickly and easily record high-impact animated demos, tutorials, software simulations, and training materials - with no coding. Capture your use of any application or desktop activity you perform. When recording is complete, DemoCharge instantly creates a simulation based on your actions in Flash, DemoGIF (animated GIF), Java Applet, or AVI format - including all visible movements of the mouse.

The animated content can be published to the Web or used in offline electronic documentation and Help files - delivering effective presentations, documentation, or any other information in a dynamic format for use in training, sales, marketing, or user support.

Key Feature Summary

Capturing/Recording
- Smart auto-capturing by detecting screen changes, menu actions, and clicks and mouse movements
- Manual recording
- Capture full screen, window, or region
- Background mode
- Full-motion recording, including mouse cursor movement
- Action-based recording
- Ability to capture and append additional frames to existing demos

Output Format
- Animated GIF output (DemoGIF) with optimal compression, suitable for emails
- Flash (SWF) output * (Professional version only)
- Java Applet output * (Professional version only)
- AVI output * (Professional version only)
- High output compression (small file sizes) without loss of original quality
- Resizable output - create demos in different resolutions

Editing
- Intuitive and easy to use GUI
- Thumbnail view
- Timeline view for time-based frame and effect manipulation
- Properties panel
- Preview mode via internal demo player
- Customizable workspace
- Masterframe
- Cut, copy, paste, and duplicate frames and effects
- Hide frame
- Customizable mouse cursors and tracks
- Full undo/redo management

Effects & Captions
- Balloon, caption, image, and highlight effects
- Effects can be extended across multiple frames
- Effects can fade-in and fade-out
- Many predefined balloon shapes

Key Benefits

- Low cost delivery of dynamic presentations, documentation, or any other information for use in training, sales, marketing, or user support.

- Grasp the true functionality or your software, making it easier for end-users to learn the intricacies of any roduct.

- Export projects in a variety of formats including: Flash (.SWF), DemoGIF (GIF), Java Applet, or AVI.

- Quickly create brief demonstrations or tutorials with file sizes small enough to email to your customers.

- Add a new element to your online Knowledge Base to truly "show-and-tell".

- Replace boring static images with dynamic details to instanty rejuvenate your Web site.

System Requirements

Intel Pentium Processor, AMD or equivalent
128 MB available RAM
10 MB available disk space
16-bit color monitor capable of 800 x 600 resolution
Windows 98, ME, XP, NT4, 2000 or 2003
